Q.5 > Pascal's Triangle:

Method 1: Iterative Sol":

Step1: - Pascel's Triangle d' ETITET POSER 7000 & 1st

3th last Element 1 Etal & 1 STIMU STA Step d' ETI

edge case 42001 1

(i) 31JIR given rows 'O' & It '[]' (empty array) seturn

(ii) 3/12 pt & row to 1st 3/12 lest element 97
1 22 25/1.

es: -

 $7001 \rightarrow [1]$ $7002 \rightarrow [1,1]$ $7003 \rightarrow [1,-,1]$ $7004 \rightarrow [1,-,1]$ $7005 \rightarrow [1,-,-,1]$

find tit 21

Step 2: EHT triangle name of variable of 3 3212 in 1 push of from the primary of setum of the given nows 1' to the primargle of setum of the time : Let primargle = [1];

STA OTTHETH EZ rows and praverse total to the,

Step3: 5HH EN PES 3HZ loop & use still, 2t current row of Ex elements of traverse to 2111 | 3HZ STA loop & 3HR EST EX row & middle elements of fill otil 1

: El row & middle elements & fill & A & Mer 3H & previous Row & Same col. (HIMOT rows & 2nd col.

fill & IT & It row 2 & I A 2nd col) + previous Row &

Same col - 1 & Value put & \$\frac{1}{4} & \frac{1}{4} & \f

Note: Posse space middle si sand & , to inner book (row to elements of praverse) 321 arts & vinter 1

Step 4: - STA Skep A' EN last element pers Admod '' st current Row A' push & 2011

: 52106 0T77 current Row of EN triangle A' push

of 2011

```
